

SEMESTER I

CODE	COURSE TITLE
18CSPC101	ADVANCED COMPUTER ARCHITECTURE

Category	CIA	ESE	L	T	P	Credit
Core	25	75	56	4	-	4

Preamble

Introduce the students, the recent trends in the field of computer architecture, parallel processing and gain knowledge in problem solving skills using parallel algorithms.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Recall the basic concepts of computer architecture	K1
CO2	Identify the performance of different computer structures	K3
CO3	Define the fundamental knowledge in architecture design, pipelined processor design and their impacts on performance	K1
CO4	Analyze the communication and the computing possibilities of parallel system architecture	K4
CO5	Analyze the parallel algorithms	K4

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5
CO1	S	S	S	M	S
CO2	S	M	S	S	L
CO3	S	S	L	M	S
CO4	S	S	M	S	M
CO5	S	S	M	S	S

S- Strong; M-Medium; L-Low

Syllabus

UNIT I

12 Hrs.

Introduction to parallel processing: Evolution of Computer Systems– Parallelism in uniprocessor Systems – Parallel Computer structures – Architectural Classification schemes – Flynn’ Classification – Feng’s Classification – Handler’s Classification – Parallel Processing Applications.

UNIT II

12 Hrs.

Principles of Pipelining and Vector Processing: Pipelining: An Overlapped Parallelism – Principles of Designing Pipelined Processors - Instruction Prefetch and Branch Handling - Data Buffering and Busing structure - Internal forwarding and Register Tagging – Hazard

Detection and Resolution – Job Sequencing and Collision Prevention – Vector processing requirements - Characteristics – Pipelined Vector Processing methods.

UNIT III

12 Hrs.

Solving Problems in Parallel: Utilizing Temporal Parallelism – Utilizing Data Parallelism – Comparison of Temporal and Data Parallel Processing – Data parallel Processing with Specialized Processor – Inter-task Dependency. **Instructional Level Parallel Processing:** Pipelining of Processing Elements – Delays in Pipeline Execution – Difficulties in Pipelining.

UNIT IV

12 Hrs.

Structure of Parallel Computers: A Generalized Structure of Parallel Computers- Classification of parallel Computers- Vector Computers- A Typical Vector Supercomputers- Vector Computer on a CHIP-IRAM- Array Processors- Shared memory Parallel Computers.

UNIT V

12 Hrs.

Parallel Algorithms: Models of computation – Analysis of Parallel Algorithms Prefix Computation – Sorting – Searching – Matrix Operations – Practical Models of Parallel Computation.

SEMESTER I

CODE	COURSE TITLE
18CSPC102	DESIGN AND ANALYSIS OF ALGORITHMS

Category	CIA	ESE	L	T	P	Credit
Core	25	75	70	5	-	4

Preamble

This course aims at facilitating the students to understand the various data structures, their organization and operations and helps the students to solve a given problem using an algorithm. It enables to mathematically analyze the algorithms for its efficiency and effectiveness.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Recall the organization and operations of data structures	K1
CO2	Compare different algorithmic approaches, techniques and methods	K2
CO3	Apply Greedy method to solve the problems	K3
CO4	Analyze a given algorithm for its efficiency based on time and space it occupies and implement Dynamic Programming	K4
CO5	Estimate the given problem with mathematical rigor to provide an algorithmic based solution	K5

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5
CO1	S	S	S	S	M
CO2	S	S	M	L	S

CO4	S	S	M	S	M
CO5	S	S	M	S	S

S- Strong; M-Medium; L-Low

Syllabus

UNIT I

15 Hrs.

Introduction: Algorithm Definition and Specification – Performance Analysis.
Elementary Data structures: Trees – Dictionaries – Priority Queues – Sets and Disjoint Set Union – Graphs. **Divide – And – Conquer:** - General method – Binary Search – Finding the Maximum and Minimum – Merge Sort – Quick Sort.

UNIT II **15 Hrs.****The Greedy Method:** General Method – Knapsack Problem – Minimum Cost Spanning Tree : Prim’s Algorithm and Kruskal’s Algorithm – Single Source Shortest Path.**UNIT III** **15 Hrs.****Dynamic Programming :** General Method – Multistage Graphs – All Pair Shortest Path –0/1 Knapsack – Traveling Salesman Problem .**UNIT IV** **15 Hrs.****Backtracking:** General Method – 8-Queens Problem – Sum of Subsets – Graph Coloring – Hamiltonian Cycles – Knapsack Problem.**UNIT V** **15 Hrs.****Basic Traversal and Search Techniques** – Branch and Bound Method – 0/1 Knapsack Problem – Traveling Salesperson.**Text Book**

SEMESTER I

CODE	COURSE TITLE
18CSPC103	ADVANCED SOFTWARE ENGINEERING

Category	CIA	ESE	L	T	P	Credit
Core	25	75	57	3	-	4

Preamble

The main objective of the course is to provide the concepts of software engineering. Analyzing, designing, testing and assuring the quality of the developed software. To enable the students to overcome the various risk factors while developing the software in an efficient manner.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Recall the process model for software project development	K1
CO2	Develop use cases and data models	K3
CO3	Build various design concepts and models for a given software system	K3
CO4	Apply various testing strategies for validating the complexity of software system	K5
CO5	Analyze the quality of system using various metrics	K4

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5
CO1	S	S	M	S	S
CO2	S	S	M	S	L
CO3	S	S	L	M	S
CO4	S	M	S	S	M
CO5	S	S	M	S	S

S- Strong; M-Medium; L-Low

Syllabus

UNIT I

12 Hrs.

Introduction to Software Engineering : The evolving role of software – The changing nature of software . A Generic View of Process – Process Models – Agile Process Models – Software Engineering practice- planning and modeling practice.

UNIT II

12 Hrs.

Requirement Engineering: Requirement Engineering tasks - Initiating the Process -Eliciting Requirements- Developing Use Cases - Negotiating Requirements -Validating Requirements – Building the Analysis Models:Data Modeling Concepts-Flow-Oriented Modeling-Class-Based Modeling.

UNIT III

12 Hrs.

Design Engineering: Design Process-Design Concepts – Design Models – Pattern Based Design – Software Architectural – Data Design – Component – Designing class based components.

UNIT IV

12 Hrs.

Testing Strategies: Software Testing Strategies -Strategic Issues -Test Strategies for conventional software -Strategies for object oriented software - Validation testing -System testing.

Testing Tactics: Testing Fundamentals – Black Box – White Box –Basis Path-Control Structure.

UNIT V

12 Hrs.

SCM and Quality Assurance: Product Metrics. Estimation: Empirical Estimation models – Risk Management – Quality Management: Concepts-SQA-Software Reviews-Formal Technical Reviews-Statistical Software Quality Assurance – Change Management -Software Configuration Management-The SCM Process.

SEMESTER I

CODE	COURSE TITLE
18CSPC104/ 18CAPC309	ADVANCED OPERATING SYSTEM

Category	CIA	ESE	L	T	P	Credit
Core	25	75	71	4	-	4

Preamble

The purpose of this course is to study, learn and understand the advanced concepts of Advanced Operating System. To learn the mechanism of operating system to handle processes and threads and their communication.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Recall various OS architectures	K2
CO2	Ability to utilize various type of architecture for Resource management.	K4
CO3	Classify the implementation process management and file system	K4
CO4	Outline the principles of various OS	K1
CO5	Construct the process according to the complexity of a problem	K3

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5
CO1	S	S	M	S	S
CO2	S	M	S	S	L
CO3	S	S	M	L	S

CO5	S	S	S	S	M

S- Strong; M-Medium; L-Low

Syllabus

UNIT I

15 Hrs.

Fundamentals: What is a Distributed Computing System? Distributed Computing System Models – What is Distributed Operating system – Issues in Designing a Distributed Operating System – Introduction to Distributed Computing Environment. Remote Procedure Calls: Introduction – The RPC Model – Transparency of RPC – Implementing RPC Mechanism – Stub Generation – RPC Messages – Server Management – Parameter Passing Semantics – Call Semantics – Communication Protocols for RPCs.

UNIT II**15 Hrs.**

Distributed Shared Memory: Introduction – General Architecture of DSM Systems – Design and Implementation Issues of DSM – Granularity – Structure of Shared Memory Space – Consistency Models – Replacement Strategy – Thrashing – Advantages of DSM. Synchronization: Introduction – Clock Synchronization – Event Ordering – Mutual Exclusion – Deadlock.

UNIT III**15 Hrs.**

Resource Management: Introduction – Desirable Features of a Good Global Scheduling Algorithm – Task Assignment Approach – Load Balancing Approach – Load Sharing Approach. **Process Management:** Introduction – Process Migration – Threads – **Distributed File System :** Introduction – Desirable Features of a Good Distributed File System – File Models – File Accessing Models – File Sharing Semantics – File Caching Schemes – File Replication.

UNIT IV**15 Hrs.**

Introduction to the Kernel : Architecture of the Unix operating system – introduction to system concepts – kernel data structures. **Internal Representation of Files :** Inodes – structure of a regular file – directories – conversion of a path name to an inode – superblock – inode assignment to a new file – allocation of disk blocks. **The structure of processes:** process states and transitions – layout of system memory – the context of a process.

UNIT V**15 Hrs.**

Process Control: Process creation – process termination – awaiting process termination – invoking other programs – system boot and the init process. **Process scheduling and time:** Process scheduling – system calls for time.

SEMESTER I

CODE	COURSE TITLE
18CSPC105/ 18CAPC310	ADVANCED RELATIONAL DATABASE MANAGEMENT SYSTEM

Category	CIA	ESE	L	T	P	Credit
Core	25	75	57	3	-	4

Preamble

This course aims at facilitating the student to understand the various functionalities of DBMS software and perform many operations related to creating, manipulating and maintaining databases for Real-world applications and to understand the various designing concepts, storage methods, querying and managing databases. Able to develop, design and construct a typical enterprise database.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Summarize the basics and fundamentals of RDBMS and concept of Entity Relationship Model in Database Applications	K2
CO2	Make use of SQL for Database Definition and Manipulation	K3
CO3	Demonstration of various normalization techniques and data modeling	K2
CO4	Create a RDBMS package using PL/SQL	K4
CO5	Classify different types of databases	K4

Mapping with Programme Outcomes

CO4	S	M	S	S	M
CO5	S	S	M	S	S

S- Strong; M-Medium; L-Low

Syllabus

UNIT I

12 Hrs.

Databases and Database Users: Introduction **Database System Concepts:** Data Models, Schemas and instances – Three schema Architecture and Data Independence – Database Languages and Interfaces – Database System Environment .

Data Modeling Using ER Model: Entity Types, Entity Sets, Attributes and Keys –Relationships, Relationship Types, Roles and Structural Constraints – Weak Entity Types – ER Diagrams, Naming Conventions and Design issues - Enhanced Entity-Relationship (EER) Modeling.

UNIT II

12 Hrs.

SQL: Data Definition Language(DDL) – Data Management and Retrieval - Working with Tables Functions and Grouping - Join and Set Operators **Advanced Features: Objects, Transactions and Data Control:** Views.

UNIT III**12 Hrs.**

Functional Dependencies and Normalization for Relational Databases: Informal Design Guidelines – Functional Dependencies - Normal Forms Based on Primary Keys – Definitions for Second and Third Normal Forms – Boyce – Codd Normal Form. **Relational Database Design Algorithms and Further Dependencies :** Multivalued Dependencies and Fourth Normal Form – Join Dependencies and Fifth Normal Form. **Introduction to Transaction Processing Concepts and Theory:** Introduction to Transaction Processing – Transaction and System Concepts – Desirable Properties of Transaction – Transaction Support in SQL.

UNIT IV**12 Hrs.**

PL/SQL Cursors and Exceptions: Cursors – Implicit Cursors – Explicit Cursors – Explicit Cursors Attributes - Implicit Cursors Attributes – Cursor FOR Loops – SELECT ...FOR UPDATE Cursor – WHERE CURRENT OF Clause – Cursor with Parameters – Cursor Variables: An Introduction – Exceptions – Types of Exceptions. **PL/SQL Named Blocks:** Procedures- Functions – Packages – Triggers.

UNIT V**12 Hrs.**

Enhanced Data Models for Advanced Applications : Multimedia Databases- **Introduction to Deductive Databases:** Overview of deductive Databases – Prolog/Datalog Notation-Clausal form and Horn Clauses –Interpretation of Rules –Datalog Programs and their Safety. **Distributed Databases:** Distributed Database Concepts – Types of distributed Database Systems

SEMESTER I

CODE	COURSE TITLE
18CSPCP01	DESIGN AND ANALYSIS OF ALGORITHMS LAB

Category	CIA	ESE	L	T	P	Credit
Core	40	60			75	3

Preamble

Objective of this course is to design and develop algorithms to solve problems by using different methods, find the efficiency of algorithm in terms of time and space complexity.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Demonstrate the concepts for elementary data structures	K2
CO2	Develop a program using Divide and Conquer Method	K3
CO3	Construct a program for tree concepts	K3
CO4	Solve problems using Greedy method and Dynamic Programming Method	K3
CO5	Compare Backtracking and Branch and Bound Method to solve problems	K4

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5
CO1	S	S	S	M	S
CO2	S	M	S	S	L
CO3	S	S	M	L	S
CO4	S	M	S	S	M
CO5	S	S	S	S	M

S- Strong; M-Medium; L-Low

Syllabus

Program using following Concepts:

Data Elementary Structures

1. Perform Stack Operations for the finite number of elements.
2. Perform the Queue Operations for the finite number of elements.

Divide and Conquer Method

3. Search an element in the array of elements using Binary Search Method.
4. Sort the array of elements using Quick Sort Method.

Basic Search Tree Traversal

5. Search the Path for a given nodes using Breadth First Search and Depth First search Method.

Greedy Method

6. Solve the Knapsack problem and find the optimal solution using Greedy Method
7. Compute Minimum Cost Spanning Tree - Prim's Algorithm for any given graph using Greedy Method.

Dynamic Programming Method

8. Construct the shortest path using Multistage graph in dynamic programming
9. Determine the shortest path from source to destination for any given Matrix using All Pair Shortest Path method.

Backtracking Method

10. Solve the N-Queens Problem using Backtracking Method.
11. Color any given number of nodes (no two edges carries same color) using Graph Coloring Method.

Branch and Bound Method

12. Solve the Traveling Sales Person problem using Branch and Bound Method.

Pedagogy

Lecture, PPT.

SEMESTER II

CODE	COURSE TITLE
18CSPC206	ADVANCED JAVA

Category	CIA	ESE	L	T	P	Credit
Core	25	75	86	4	-	5

Preamble

The main objective of the course is to provide advanced Java programming concepts, Applet programming, Database connectivity and implement java programming concepts to develop solutions for real world problems.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1	Recall the basics of OOPS and relationships among them for a specific problem	K1
CO2	Make use of the concepts of polymorphism ,inheritance and packages	K3
CO3	Make use of interfaces, Multithreading and synchronization in complex applications	K3
CO4	Analyze the various activities of Applets and Swing	K4
CO5	Apply the concept of database connectivity using Servlet and JDBC	K4

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5
CO1	S	M	S	M	S
CO2	S	M	S	S	L
CO3	S	S	L	M	S
CO4	S	M	M	S	S
CO5	S	S	S	M	S

S- Strong; M-Medium; L-Low

Syllabus

UNIT I

18 Hrs.

A Closer Look at Methods and Classes : Overloading Methods - Overloading Constructors - Using Objects as Parameters - Argument Passing- Returning Objects - Recursion - Introducing Access Control. Inheritance : Inheritance Basics - Using super - Creating a Multilevel Hierarchy - Method Overriding - Dynamic Method Dispatch - Using Abstract Classes - Using final with Inheritance. Packages.

UNIT II

18 Hrs.

Interfaces : Defining an Interface - Implementing Interfaces - Nested Interfaces - Applying Interfaces- Variables in Interfaces - Interfaces Can Be Extended. Multithreaded Programming : The Java Thread Model - The Main Thread - Creating a Thread - Creating Multiple Threads - Thread Priorities. Synchronization : Using Synchronized Methods - The synchronized Statement - Interthread Communication - Suspending, Resuming, and Stopping Threads - Using Multithreading. I/O Basics.

UNIT III

18 Hrs.

The Applet Class : Two Types of Applets - Applet Basics - Applet Architecture - An Applet Skeleton - Simple Applet Display Methods - Requesting Repainting - Using the Status Window. Event Handling. Introducing the AWT: Working with Windows, Graphics, and

Text : AWT Classes - Window Fundamentals - Working with Frame Windows - Creating a Frame Window in an Applet. Working with Graphics - Working with Color - Setting the Paint Mode - Working with Fonts - Managing Text Output Using Font Metrics.

UNIT IV

18 Hrs.

Using AWT Controls, Layout Managers, and Menus : Control Fundamentals - Labels - Using Buttons - Applying Check Boxes – Checkbox Group - Choice Controls - Using Lists - Managing Scroll Bars - Using a TextField - Using a TextArea. Understanding Layout Managers. Menu Bars and Menus, Dialog Boxes. Introducing Swing : The Origins of Swing - Swing Is Built on the AWT - Two Key Swing Features - The MVC Connection - Components and Containers - The Swing Packages. Java Beans.

UNIT V

18 Hrs.

Servlets: The lifecycle of a Servlet – Using Tomcat for servlet development– A Simple Servlet – The Servlet API – The javax.Servlet Package – Reading servlets Parameters. The javax.servlet.http package – Handling HTTP requests and responses – Using cookies. Database Access with JDBC: JDBC Architecture – Accessing a DataBase – Sample JDBC Servlet.

SEMESTER II

CODE	COURSE TITLE
18CSPC207	DIGITAL IMAGE PROCESSING

Category	CIA	ESE	L	T	P	Credit
Core	25	75	85	5		5

Preamble

The objective of the course is to expose students to the fundamental concepts of image processing, mathematical operations, image analysis algorithms and current applications in the field of digital image processing.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1.	Understand the general terminology of digital image processing	K2
CO2.	Examine various types of intensity transformations and spatial filtering	K4,K5
CO3.	Identify various degradation and restoration Process	K3
CO4.	Categorize various compression techniques and interpret image compression standards	K4
CO5.	Develop various image segmentation methods and morphological image processing	K3

Mapping with Programme Outcomes

Cos	PO1	PO2	PO3	PO4	PO5

S- Strong; M-Medium; L-Low

Syllabus

UNIT I

(18 Hrs.)

Introduction: What is Digital Image Processing – the origin of DIP – Examples of fields that use DIP – Fundamentals Steps in DIP – Components of an Image Processing System. **Digital Image Fundamentals:** Elements of Visual Perception – Light and the Electromagnetic Spectrum – Image Sensing and Acquisition – Image Sampling and Quantization – *Some Basic Relationship Between Pixels* – Linear & Nonlinear Operations.

UNIT II

(18 Hrs.)

Intensity Transformations and Spatial Filtering: Background – Some Basic Intensity Transformations Functions – Histogram Processing – Fundamentals of Spatial Filtering – Smoothing Spatial Filters – Sharpening Spatial Filters – Combining Spatial Enhancement Methods.

UNIT III (18 Hrs.)

Image Restoration: A Model of the Image Degradation / Restoration Process – Noise Models – Restoration is the Process of Noise only – Spatial Filtering – Periodic Noise Reduction by Frequency Domain Filtering – Linear, Portion – Invariant Degradations – Estimating the Degradation Function – Inverse Filtering– Geometric Mean Filter.

UNIT IV (18 Hrs.)

Image Compression: Fundamentals. **Some Basic Compression Methods:** Huffman Coding – Arithmetic Coding – LZW Coding. **Patterns and Pattern Classes-** Recognition Based on Decision-Theoretic Methods- Structural Methods

UNIT V (18 Hrs.)

Image Segmentation: Fundamentals – Point, Line, Edge Detection – Thresholding – Region – Based Segmentation – Segmentation by Morphological Watersheds.

SEMESTER II

CODE	COURSE TITLE
18CSPCP03	DIGITAL IMAGE PROCESSING LAB

Category	CIA	ESE	L	T	P	Credit
Practical	40	60			75	3

Preamble

Students should be able to evaluate and manipulate various image processing techniques independently using MATLAB

Course Outcomes

By the end of this course students will be able to design code and test digital image processing applications using MATLAB tool.

CO Number	CO Statement	Knowledge Level
CO1.	Apply the mathematical operations of image enhancement	K2
CO2.	Design and implement filtering techniques and descriptor computations.	K5
CO3.	Implement the concepts of feature detection and contour finding algorithms.	K4,K5
CO4.	Analyze the constraints in image processing when dealing with larger data sets.	K3
CO5.	Evaluate concepts of pseudo code and classification in real time applications.	K5

CODE	COURSE TITLE
18CSPC308	SOA AND WEB SERVICES

Category	CIA	ESE	L	T	P	Credit
Core	25	75	70	5	-	4

Preamble

Students will be able to understand the basic concepts of XML and web services.

Course Outcomes

On the successful completion of the course, students will be able to

CO Number	CO Statement	Knowledge Level
CO1.	understand the role of XML and the web	K1
CO2.	Gain knowledge on DTD and XSLT	K1
CO3.	Understand the concepts of using Schema and DOM in XML documents	K2
CO4.	Design a simple applications using XML document	K3
CO5.	Know the basic concepts of .NET And J2EE.	K2

CO5.		S	M		M

S- Strong; M-Medium; L-Low

Syllabus

UNIT I

(15 Hrs)

INTRODUCTION: Role of XML - *XML and The Web* - XML Language Basics - SOAP - Web Services - Revolutions of XML - Service Oriented Architecture (SOA) – Creating Markup with XML : Introduction to XML Markup – Parsers and Well Formed XML documents – parsing an XML document with MS XML – characters – Markup - Cdata Sections – XML Namespaces.

UNIT II

(15 Hrs)

DTD : Parsers, Well-Formed and Valid XML Documents – Document Type Declaration – Element Type Declarations – Attribute Declarations – Attribute Types – Conditional Sections. Schemas : Introduction – Schema vs DTDs – Microsoft XML Schema : Describing Elements - Describing Attributes – Data types.

UNIT III**(15 Hrs)**

DOM : Introduction – DOM Implementation – DOM with Java Script - DOM Components. XSLT: Introduction – Templates – Creating Elements and Attributes – Iteration and Sorting – Conditional Processing – Copying Notes – Combining Style Sheets – Variables.

UNIT IV**(15 Hrs)**

SOAP: Overview Of SOAP - *HTTP* - XML-RPC - SOAP: Protocol - Message Structure - Intermediaries - Actors - Design Patterns And Faults - SOAP With Attachments.

UNIT V**(15 Hrs)**

WEB SERVICES: Overview - Architecture - Key Technologies - UDDI - WSDL - ebXML - SOAP And Web Services in E-Com - Overview Of .NET And J2EE.

Text Books

Sl.No.	Author Name	Title of the Book	Publisher	Year and Edition
1.	Deitel, Deitel, Nieto, Lin, Sadhu	XML How to Program	Pearson Education	2009
2	Frank P. Coyle	XML, Web Services And The Data Revolution	Pearson Education	2008

Reference Books

Sl.No.	Author Name	Title of the Book	Publisher	Year and Edition
1.	McGovern, et al.	Web Services Architecture	Morgan Kaufmann Publishers, San Francisco	2005
2.	Mike Mcgraph	XML in easy Steps	Dream Tech	2006
3	Ramesh Nagappan, Robert koczylas and Rima Patel Sriganesh	Developing Java Web Services	Wiley Publishing Inc., New Delhi	2004
4	Sandeep Chatterjee, James Webber	Developing Enterprise Web Services	Pearson Education, New Delhi	2004

Pedagogy

- Lecture, PPT, Quiz, Assignment, Group Discussion, Seminar

SEMESTER III

CODE	COURSE TITLE
18CSPC309/ 18CAPC514	ASP.NET PROGRAMMING

Category	CIA	ESE	L	T	P	Credit
Core	25	75	55	5	-	4

Preamble

Students will be able to understand the development and deployment of web applications.

Course Outcomes

On the successful of the course the students able to

CO Number	CO Statement	Knowledge Level
CO1	Understand the framework of web programming and .NET	K1-K2
CO2	Gain knowledge of web forms and controls to create a user interface	K1-K2
CO3	Explore the knowledge on C#.NET with its applications	K1-K3
CO4	Access and manipulate data in a Microsoft SQL Server database by using Microsoft ADO.NET	K1-K3
CO5	Apply advanced controls in web applications	K2-K4

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5
CO1	S	S	S	M	M
CO2	S	M	M	S	M
CO3	S	M	S	S	M
CO4	S	S	M	M	S
CO5	S	M	M	S	M

S- Strong; M-Medium; L-Low

UNIT I

12 Hrs.

ASP.NET 4.0 Essentials: Exploring the .NET Framework - Exploring the Visual Studio 2010 IDE - Exploring the ASP.NET 4.0.

UNIT II**12 Hrs.**

Application Structure and State - Web Forms: Standard Controls

UNIT III**12 Hrs.**

Introducing C# 2010 – Flow Control

UNIT IV**12Hrs.**

.NET and SQL Server – Data Access with ADO.NET

UNIT V**12Hrs.**

Validation Controls – Working with Database Controls : The SqlDataSource Control – The AccessDataSource Control – The XmlDataSource Control – The GridView Control – The DataList Control – The FormView Control - The Chart Control.

SEMESTER III

CODE	COURSE TITLE
18CSPC310	MACHINE LEARNING TECHNIQUES

Category	CIA	ESE	L	T	P	Credit
Core	25	75	70	5	-	5

Preamble

To enable the students to learn the basic concepts, principles, methods of data mining and machine learning.

Course Outcomes

CO Number	CO Statement	Knowledge Level
CO1.	Understand the basic concepts, fundamentals and various methods of preprocessing in data mining	K2
CO2.	Demonstrate the knowledge of various classification algorithms and explain how to evaluate the accuracy of predictive modeling techniques.	K2
CO3.	Explain about the types of data in cluster analysis and the methods involved in association and correlation analysis.	K2
CO4.	Understand the concepts and applications of machine learning techniques and associated computing methods	K2
CO5.	Improve and develop methods and algorithms as applicable to machine learning and data mining.	K2

On the successful completion of the course, students will be able to

Mapping with Programme Outcome

COs	PO1	PO2	PO3	PO4	PO5
CO1.	S	M	S	S	S
CO2.	S	M	S	S	S
CO3.	S	M	S	S	S
CO4.	S	M	S	S	S
CO5.	S	M	S	S	S

S- Strong; M-Medium; L-Low

Syllabus

UNIT I

15 Hrs.

Introduction: Fundamentals of data mining – Data Mining functionalities – Classification of Data Mining – Task Primitives. Data Preprocessing: Need for Preprocessing – Descriptive Data Summarization - Data Cleaning – Data Integration and Transformation – Data Reduction

UNIT II

15 Hrs.

Classification and Prediction: Issues – Decision tree Induction – Bayesian classification – Back propagation – Support Vector machine. Prediction – Other classification methods. Prediction: Accuracy and error measure – Evaluating the accuracy of a classifier or predictor.

UNIT III

15 Hrs.

Clustering Analysis: Cluster analysis Introduction - Types of data in cluster analysis- Hierarchical methods – Density-Based Method - Outlier Analysis – Mining Frequency Patterns, Associations, Mining Various Kind of Association Rules - Constraint-Based Association Mining.

UNIT IV

15 Hrs.

Introduction: What Is Machine Learning? - Examples of Machine Learning Applications. **Supervised Learning:** Learning a Class from Examples – Vapnik - Chervonenkis (VC) Dimension - Probably Approximately Correct (PAC) Learning – Noise - Learning Multiple Classes – Regression - Model Selection and Generalization - Dimensions of a Supervised Machine Learning Algorithm.

UNIT V

15 Hrs.

Bayesian Decision Theory: Introduction – Classification - Losses and Risks - Discriminant Functions - Utility Theory - Association Rules. **Parametric Methods:** Introduction - Maximum Likelihood Estimation - **Evaluating an Estimator:** Bias and Variance 65 - The Bayes' Estimator - Parametric Classification – Regression - **Tuning Model Complexity:** Bias/Variance Dilemma - Model Selection Procedures.

SEMESTER III

CODE	COURSE TITLE
18CSPCP04/ 18CAPCP09	ASP.NET PROGRAMMING LAB

Category	CIA	ESE	L	T	P	Credit
Practical – IX	40	60	-	-	75	3

Preamble

To make the students to develop web applications using C#.NET in .NET environment.

Course Outcomes

On the successful completion of the course, Students should able to

CO Number	CO Statement	Knowledge Level
CO1	Implement web application using basic controls.	K3
CO2	Skills to develop application using advanced controls.	K3
CO3	Demonstrate the concept of flow control in C#.NET.	K4
CO4	Illustrate the concept of Data grid and Grid View Controls.	K3
CO5	Develop applications using XML Data Source Control.	K3

Mapping with Programme Outcomes

COs	PO1	PO2	PO3	PO4	PO5
CO1	S	S	M	M	L
CO2	S	M	M	S	M
CO3	M	S	S	M	L
CO4	M	S	M	M	S
CO5	M	S	S	M	S

S- Strong; M-Medium; L-Low

Syllabus

1. Develop a web application using controls.
2. Develop a web application using CSS and Hyper link control.
3. Develop a web application using Bulleted List Control and Drop down list.
4. Develop an ASP.NET web page to demonstrate the use of image control and File upload control.
5. Develop an ASP.NET web application using Custom Control (User Control).
6. Develop a web application to demonstrate Flow Control using C#.NET.
7. Develop a web application using Data List, DataGrid View Controls.
8. Develop a web application using Chart Control.
9. Develop a web application using validation controls.
10. Develop a web application using XmlDataSource Control.
